Intent to Sole Source

SOUTH CAROLINA

DEPARTMENT OF TRANSPORTATION

The South Carolina Department of Transportation is seeking information for Structural Health Monitoring (SHM) System. Following are the specifications for the system:

1. Requirements for the system:
 - a. Proposed sensor system software shall be capable of remote upgrade, remote rebooting, remote diagnostics, remote changes to sensor data capture frequency and reporting times, and capable of capturing "on demand" readings at any time.
 - b. Proposed controller system shall capture and store the data locally, then transmit the data wirelessly to a Network Operations Center (NOC), for secure storage and 'on-demand' data accessibility to any number of preauthorized personnel. Such NOC should have a demonstrated data reliability of five 9's, or 0.99999.
 - c. Proposed sensor system will be furnished by one entity responsible for system integration on a turnkey basis.
 - d. Proposed sensor controller will be configured to allow capacity for future upgrades on a TBD basis.
 - e. Proposed sensors and systems must be compatible with currently deployed structural monitoring technology.
 - f. Proposed sensor system must have the ability to "alarm" the sensor readings with interrogations every minute, then providing e-mails or other electronic means of contact to key SCDOT personnel if predefined limits of displacement/strain /crack growth or propagation are exceeded.
 - g. Sensor capable of capturing both current and maximum displacement/strain values (without uninterruptible power supply).
 - h. System must have an information presentation protocol that utilizes the Internet, allowing SCDOT engineers to view the complete sensor database 'on-demand' from their desktop computers, download the captured data on Excel spreadsheets, or capture new data "on-demand".
2. Requirements for use of maximum strain sensors:
 - a. Proposed sensors shall have two channels, capable of capturing both current and maximum displacement/strain readings (either tension or compression);
 - b. The maximum displacement/strain channel must also be capable of capturing maximum displacement/strain data without power.
 - c. Proposed sensors shall be used for both instantaneous and maximum displacement/strain; and be capable of use in applications for crack growth/propagation; and out-of-plane bending.
 - d. Proposed sensors shall be housed in rugged casing, have a calibrated resolution of <3 microns and accuracy of <5 microns.
 - e. Proposed sensors shall capture maximum displacements of up to 11mm without continuous power supply.

- f. Proposed sensors shall be capable of surviving in harsh outdoor environments and be fully cover-able after installation.
- g. Proposed sensors shall have a maximum displacement/strain channel that is manually re-settable.
- h. Proposed sensors should have a of successful deployment in field applications including bridges, buildings, parking decks, tunnels, etc. in outdoor or harsh environments, improving owner reliability
- i. Proposed sensor technology and system configurations shall have broad application use, e.g. displacement, strain, crack width, crack propagation, out-of plane-bending, and element to element displacement (bearing to member), reducing system complexity and owner costs.
- j. .
- k. Proposed sensor technology will have proven field durability without maintenance, reducing owner costs.
- l. Proposed sensors will not require field calibration or periodic temperature correction, reducing owner costs and complexity.
- m. Proposed sensors can be configured to read either tensile or compressive displacements/strains.
- n. Proposed sensors can be reused, reducing owner costs.
- o. Proposed sensor technology shall be use-able on either steel or concrete members, increasing owner flexibility.

If you have a product that meets or exceeds the above specifications or if you have questions please contact Vickie Stephens at stephensvw@scdot.org by 6/17/2015.
